CC screening of genetic mutations, serotype, organism or strain components of arrays which are useful for diagnostic and prognostic components of arrays which are useful for diagnostic and prognostic cupurposes. The polypeptides can be used to produce antibodies, and as a cc target for the screening of antimicrobial drugs. The polypeptides can cc antso be used in vaccine formulations, and to identify agonists and can be used for the treatment and prevention of cd iseases including bacterial infection, otitis media in infants and continuation. The polypeptides can accumulation in the elderly, sinusitis, nosocomial infections and communiation in the middle ear, auditive nerve damage, delayed speech car of entaring, infections of the upper respiratory tract and middle ear communing, infections on some of the upper respiratory tract and middle ear communing, infections on wounds, and to thus prevent insections on wounds, and to thus prevent tissue damage and/or block the cormal progression of pathogenesis in infections initiated other than by the implantation of in-welling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, can did it is no longer common to isolate M. catarrhalis strains that are resistant bacteria. This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for for Of.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large compositions. M. catarrhalis (Branhamella catarrhalis) is a large alrowed for a following the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis and analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 369-391; 545pp; English.

RESULT 3
This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for screening of genetic mutations, scrotype, organism or strain identification identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a

They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. Catarrhalis strains that are resistant to standard antibotics. The BASBO19 products of the invention

The polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists (which are bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, otitis media in infants and children, pneumonia in the elderly, sinusitis, nosocomial infections and

cc identification, identification of mutation in BASBOI3 sequences, and as components of arrays which are useful for diagnostic and prognostic cc components of arrays which are useful for diagnostic and prognostic cc purposes. The polypeptides can be used to produce antibodies, and as a cc target for the screening of antimicrobial drugs. The polypeptides and cc also be used in vaccine formulations, and to identify agonists and cc antagonists. The polypeptides, antibodies, agonists and cc antagonists. The polypeptides, antibodies, agonists and antagonists and cc diseases including bacterial infection, otitis media in infants and conhidren, pneumonia in the elderly, sinusitis, nosocomial infections and conhidren, pneumonia in the elderly, sinusitis, nosocomial infections and conhidren, pneumonia in the elderly, sinusitis, nosocomial infections and conhidren, pneumonia in the elderly, sinusitis, nosocomial infections and conhidren, pneumonia in the elderly, sinusitis, nosocomial infections and conhidrent ear and middle ear also used in the prevention of of alayed speech confection. They are also used in the prevention of adhesion of bacteria cc entaring, infection of the upper respiratory tract and middle ear proteins on wounds, and to thus prevent insections of bacteria cc entaring progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are can be used screen for new antibacterial compounds that may target these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BASB019 protein; diagnosis; infectious organism; auditive nerve damage; genetic mutation screening; antibody production; vaccine; otitis media; bacterial infection; pneumonia; sinusitis; noscomial infection; invasive disease; delayed speech learning; bacteria adhesion prevention; upper respiratory tract infection; middle ear infection; therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           M. catarrhalis BASB019

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for disposis of disease, staying disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and it

Monoclonal antibodies to the 16600 D OMP are produced by hybridomas and used to detect H.influenzae. A suspect sample is contacted with the MAb in the presence of an indicator such as radiolabelled probe.

The OMP can also be used in the development of vaccines against H. influenzas which causes pneumonia, bacteraemia, meningitis, postpartum sepsis and acute febrile tracheobronchitis in adults and neonatal sepsis ancacute ofitis media in infants and children.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the complete genome sequence of the bacterium Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Haemophilus influenzae Rd genome medium - useful for identifying

CC This sequence encodes a H. pylori outer membrane protein.
CC The protein may be used in a vaccine to prevent or treat H. pylori
CC infection or to identify H. pylori polypeptide binding compounds,
CC useful as potential H. pylori life cycle activators or inhibitors.
CC The genomic sequence of H. pylori (ATCC 55679) was determined from
CC overlapping contigs generated by mechanically shearing the bacterial
CC DNA. The sequences were analysed for ORF of at least 180 nucleotides,
CC and the predicted coding regions defined by computer evaluation. To
CC identify likely H. pylori antigens for vaccine development, the amino
CC acid sequences predicted from various ORF were analysed for significant
CC homology to other known or exported membrane proteins. Having identified
CC and determined the sequences of interest, particular regions can be
CC isolated from H. pylori by PCR amplification for recombinant polypeptide
CC isolated from H. pylori by pCR amplification for recombinant polypeptide
CC Note: This DNA sequence is not reproduced in the specification and
CC has been derived from the related specification, W09719098.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc are used to evaluate compounds, especially activators or inhibitors of compounds. The nucleic acid compounds and the pylori nucleic acid compounds are compounded and the proteins, are compounded and the proteins of a sequences. The subjects against H. compounds of the presence of these sequences in compound to inhibit expression of a gene from Helicobacter species. H. compounds the presence of these sequences are compounded to inhibit expression of a gene from Helicobacter species. H. compounds the provided and nebulised to a median size of complementary to the BstXI-cut pMPX vectors, while the overhang is not complementary. Therefore the linkers will not concatemerise nor complementary. Therefore the linkers will not concatemerise nor complementary. Therefore the linkers will not concatemerise nor complementary to the Double of the sily. The linker adapter inserts were ligated to each of the 20 pMPX vectors to construct a series of shotgun subclone libraries. The purified DNA samples were then
